BUILDER, STEP 18

One page online. The repository stays private.

Our test: Claude Code puts one result online, in two ways.

OUR TEST

Two asks, in the step 17 repository.

ASK 1

"Make a web page that shows the output of python3 changes.py, and publish it as an artifact."

ASK 2

"Put this page online with GitHub Pages, in a new public repository called pallet-changes. Only the page goes in it, not the script or the CSV."

The step 11 script and made-up export. Interactive Claude Code, accept edits mode.

THE RESULT

Two ways. Both worked.

	ARTIFACT LINK	GITHUB PAGES
From ask to page	47 seconds	Under 3 minutes
Asked for a yes	1 time	7 times
Who can open it	Only you, until you share it	Everyone on the internet
Address	claude.ai/artifact/...	name.github.io/...

One of the 7 yeses came from a git setting on my own computer.

THE PUBLIC REPOSITORY

One file. Nothing else.

```
$ git ls-files
index.html
```

The script and the CSV stayed in the private repository. We checked.

To share one page, you do not make your work public. You make a new repository for that page only.

WHAT WE SAW

It typed the numbers in.

- Claude: "I copied the figures into the page by hand, so it won't update when the CSV changes."
- New data means: run the script and publish again.
- GitHub listed a failed build, then one that worked. The page opened all the same.

THE TRAP

Public means public.

- → GitHub: Pages sites "are publicly available on the internet, even if the repository for the site is private".
- → GitHub logs the IP address of each visitor.
- → Only made-up or public data on the page. No client names, no prices, no keys.

Never make your working repository public to share one page.

MY OWN SETUP

Before this test, in numbers.

Artifacts in my gallery	24
Repositories with GitHub Pages	0 of 32

Reports, plans and dashboards, as artifact links. We counted both on 28 Oct 2026.

FREE FILES

Get the publish cheat sheet. Free.

→ Which way to choose, and who can open it

→ The two asks, word for word

→ A check before you publish

→ The page we put online
