STARTER, STEP 1

Tell Claude once who you are.

Instructions for Claude: the same question, before and after.

It keeps this in mind in every chat.

WHERE

Settings, Account, Instructions for Claude.

1. Copy the template

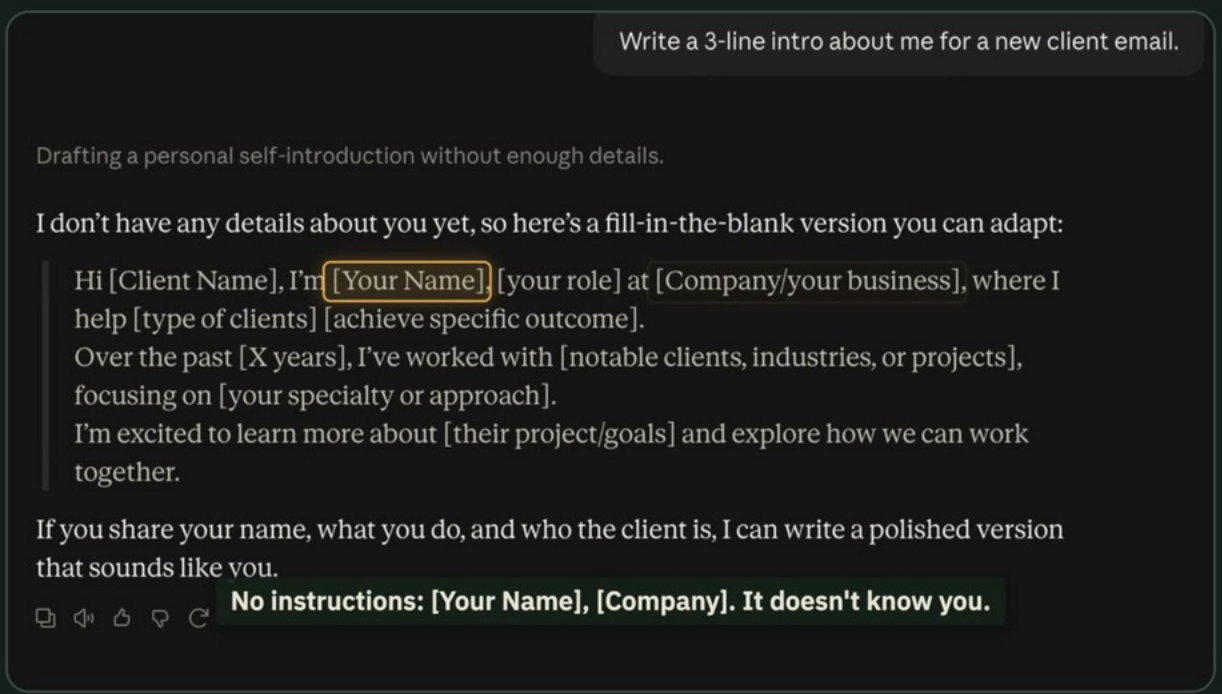

2. Replace every [bracket] with your own details

3. Paste it in and click "Save changes"

Instructions: what you tell Claude, on purpose. Memory, what Claude picks up by itself, is step 4.

BEFORE

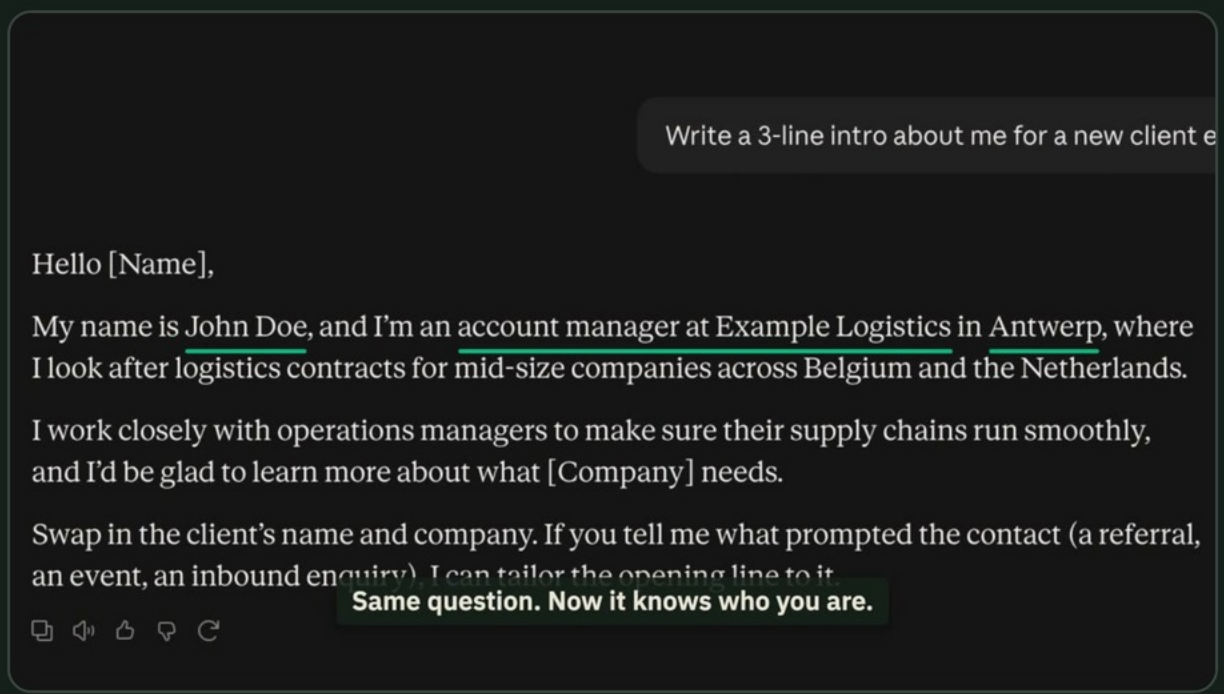

"Write a 3-line intro about me for a new client email."

No instructions. Claude does not know you, so it writes [Your Name].

AFTER

Same question. The John Doe example saved.

Name, role, company and city. The brackets left are the client's details: you add those in the chat.

KEEP OUT OF IT

Who you are goes in. Today's task does not.

Passwords, API keys, client or patient data

Today's task: that goes in the chat

Files for one job: those go in a project (step 2)

Change it any time: edit, "Save changes", and new chats use the new version.

THE RULE

Write it once. Every chat starts with it.

Our estimate: 1 to 2 minutes saved per chat.

The template and the John Doe example are free:
github.com/jwconsultancyteam/ai-starter-kit

Next: Projects. Claude gets its own desk.
