BUILDER, STEP 11

Same question. Same answer. Every week.

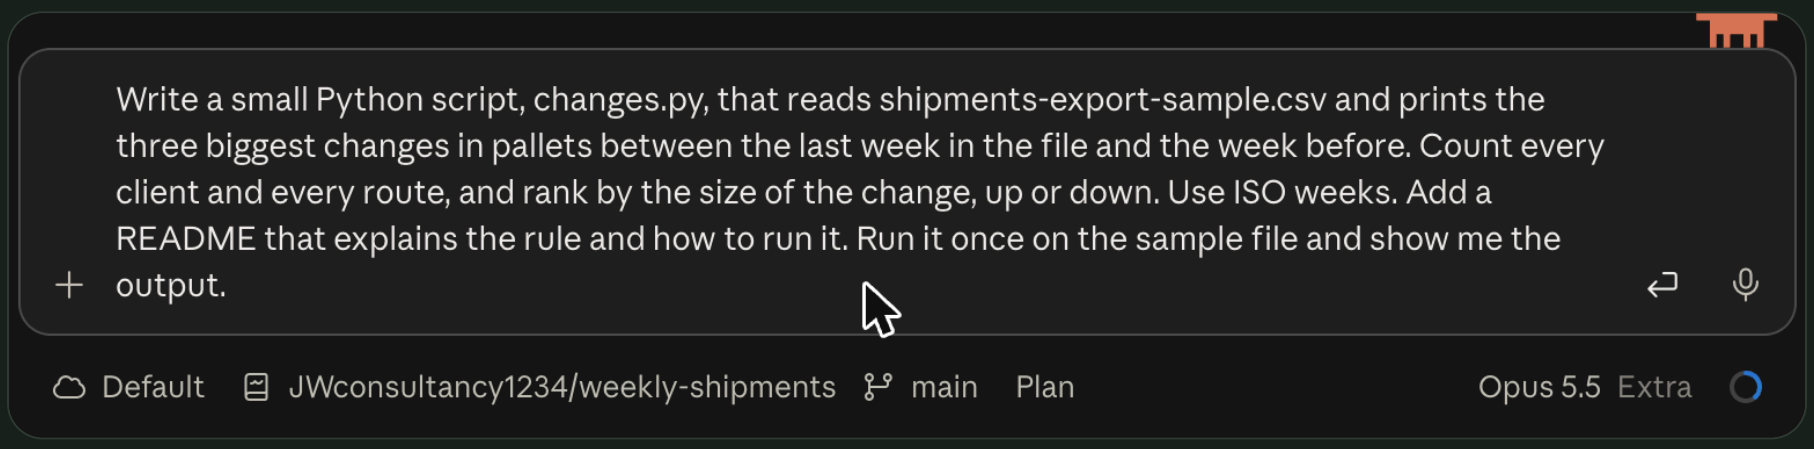

Claude Code on the web turns the Monday report into a small script, with the rule written down.

We ran it once and checked every number.

1. WHERE

claude.ai/code. Pick a repository, the branch main, and Plan.

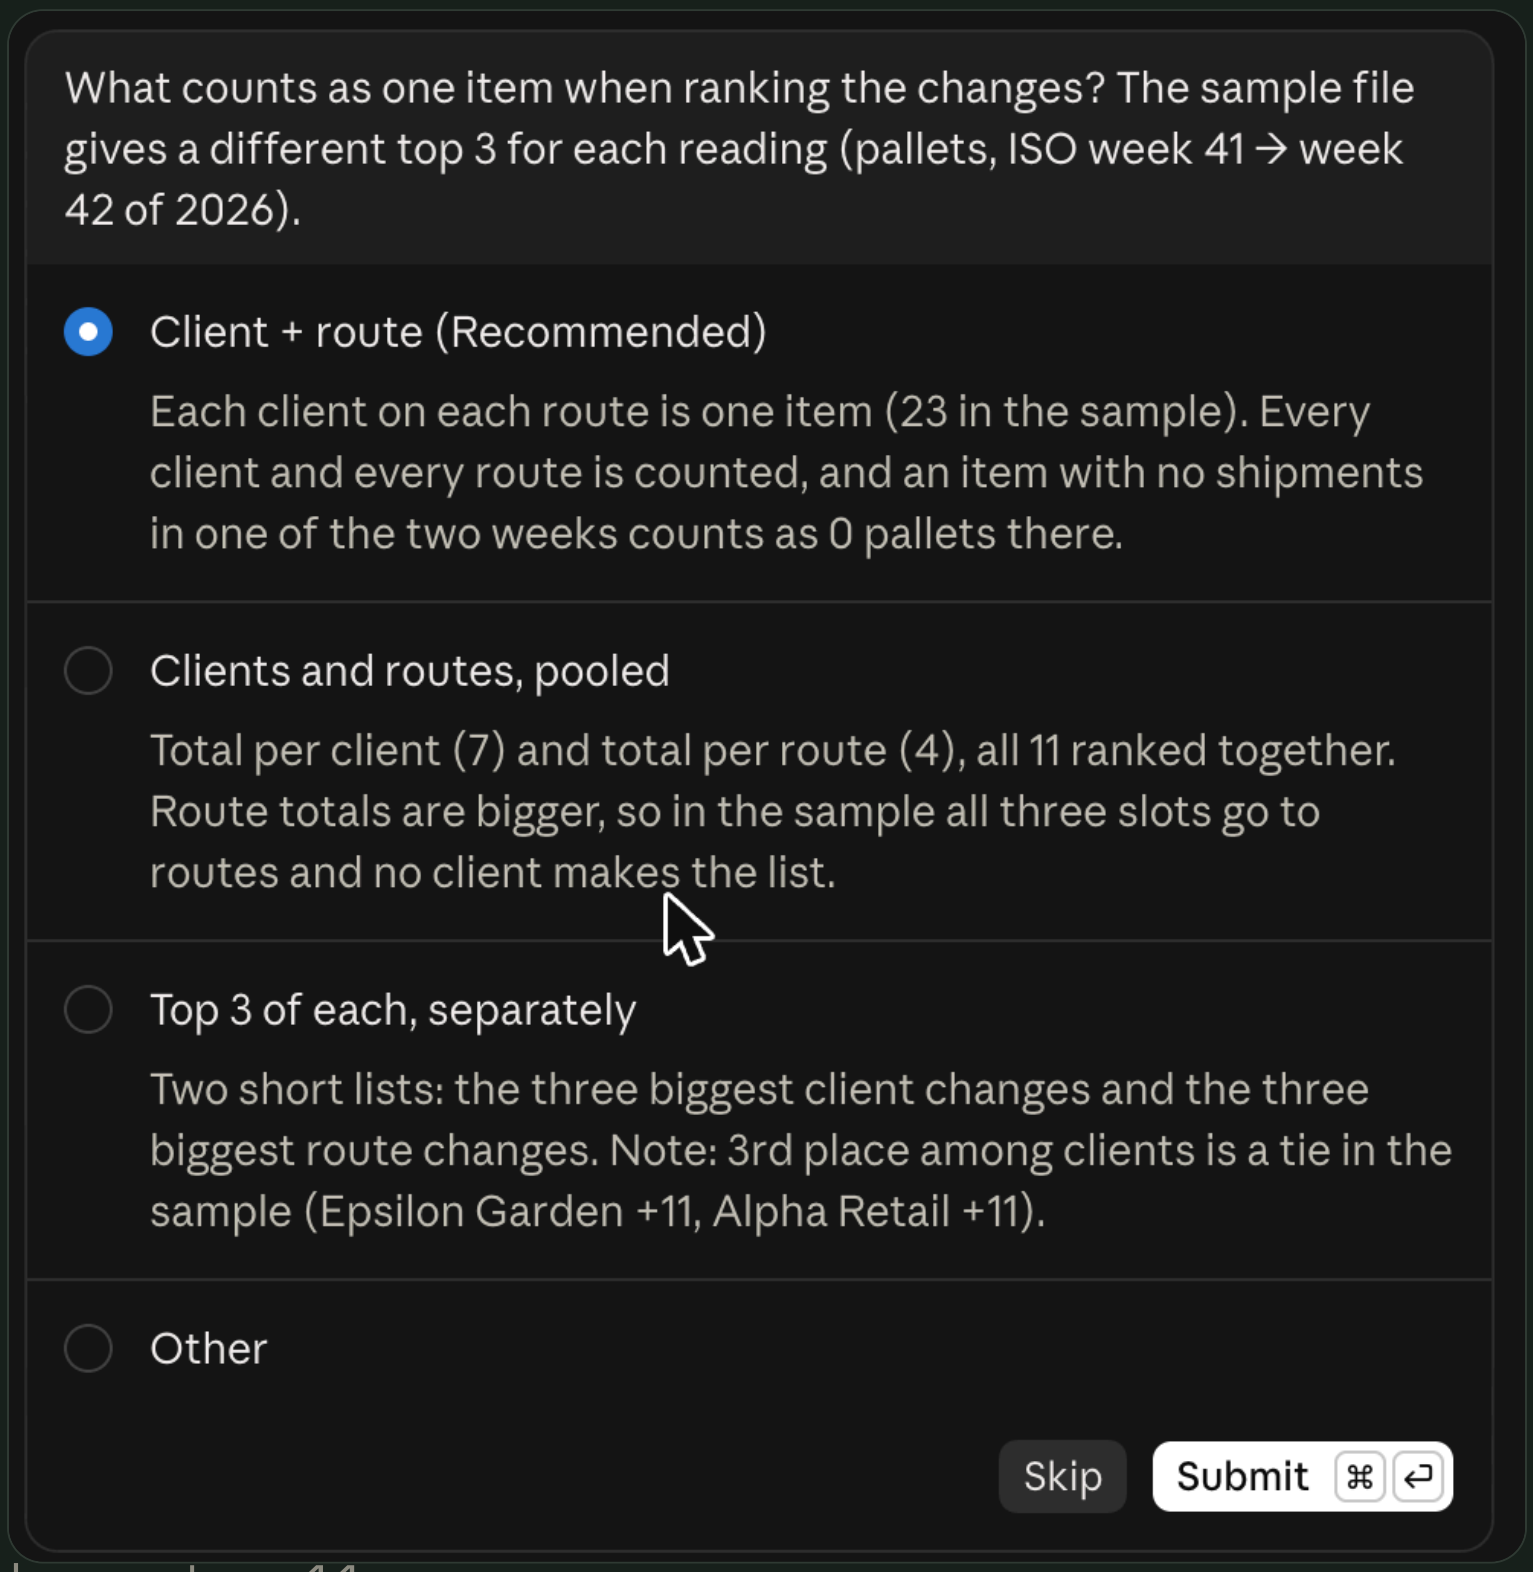

Plan: Claude shows its plan before it changes a file. Then one task, in plain words.

2. IT ASKED FOR THE RULE

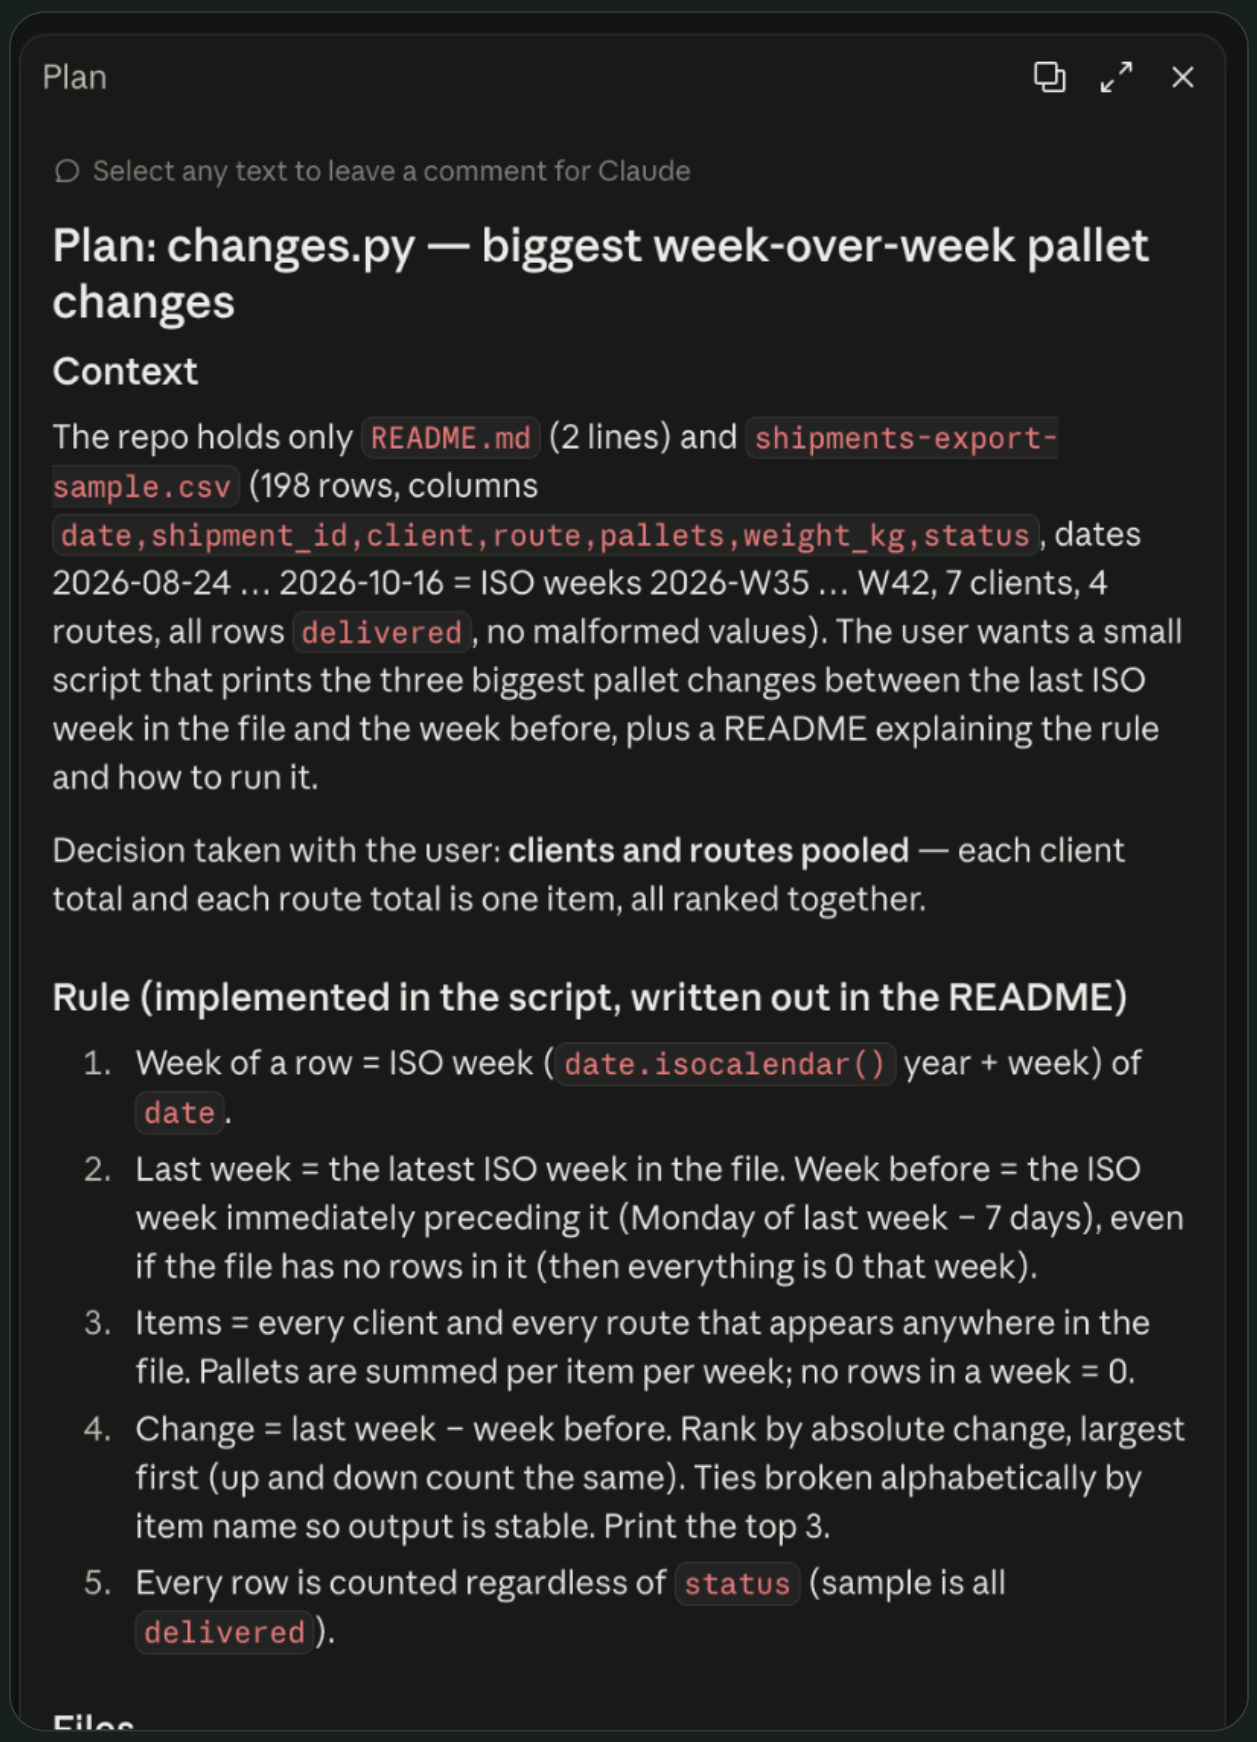

Before any code: "What counts as one item?"

In step 10 Claude picked on its own. Here it asked. We chose clients and routes, pooled.

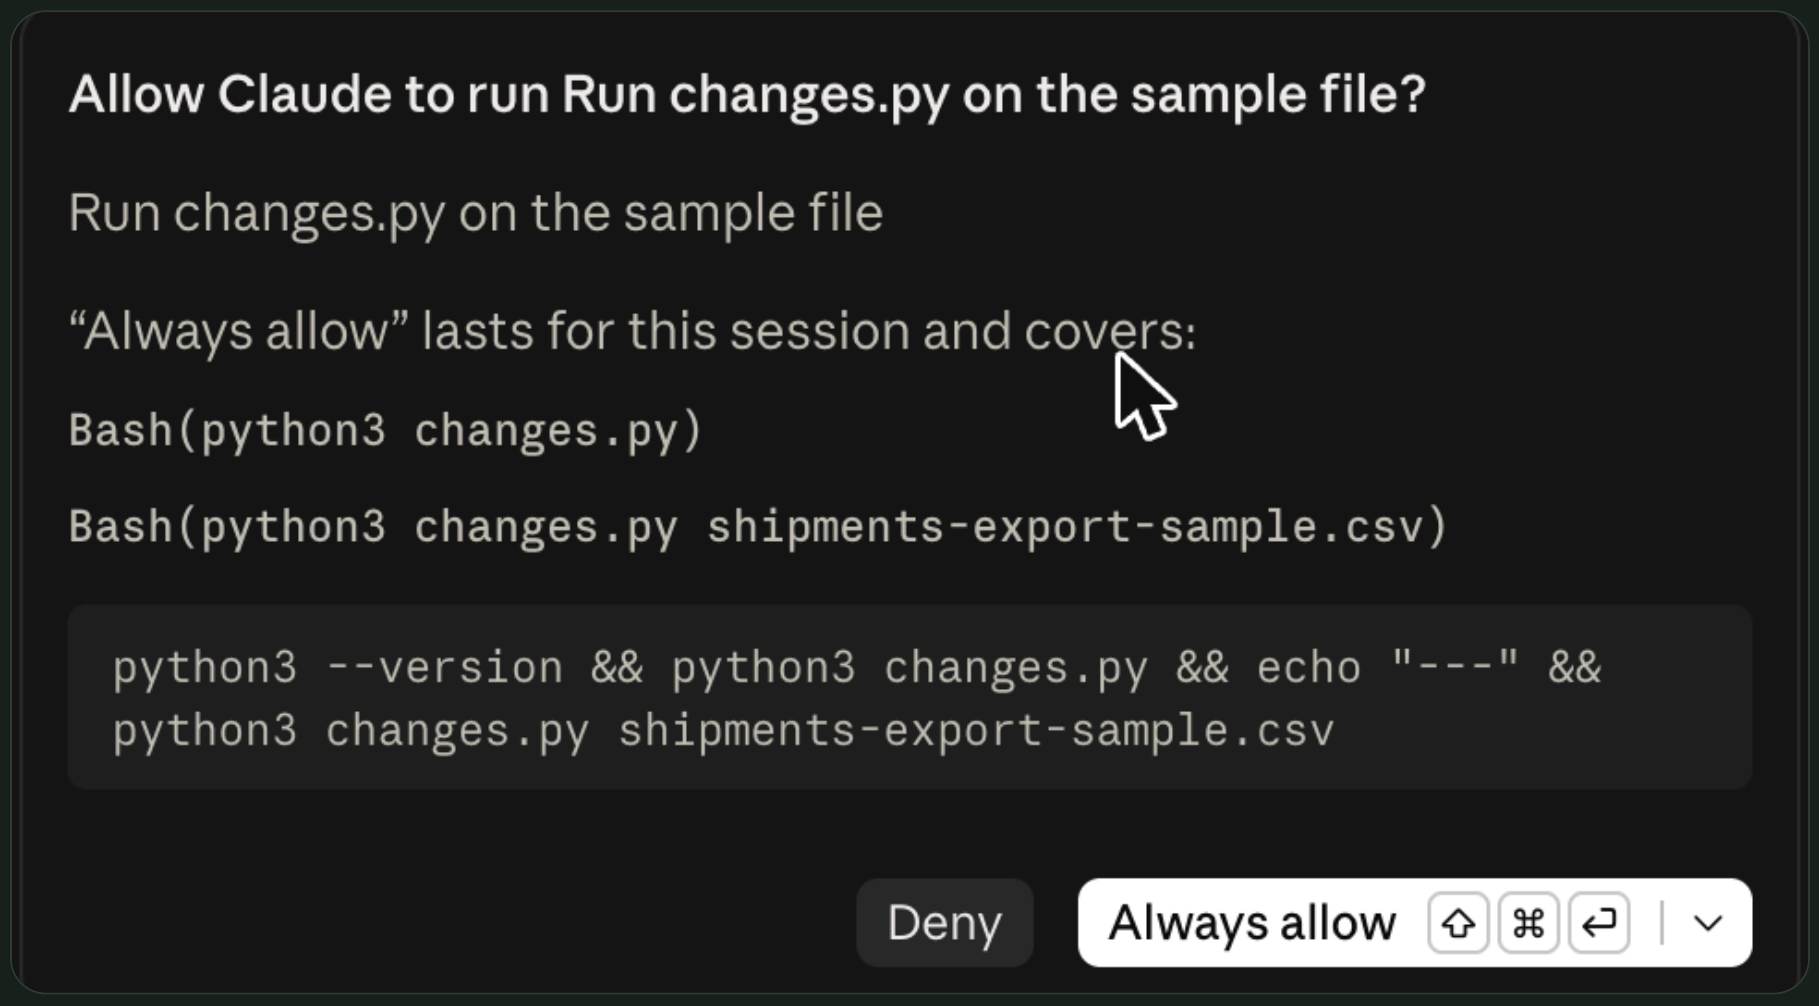

3. THE PLAN

Then it showed its plan. Nothing changed yet.

4. IT ASKS FIRST

We accepted the plan. It still asked before it ran a command.

5. CHECK THE RESULT

The output. Same as a separate count.

I've written `changes.py` and a README, run it on the sample file, and pushed both to `claude/peaceful-bohr-r32h4r`.

Output on the sample file:

```
Pallet changes, 2026-W41 -> 2026-W42 (clients and routes)
1. route  BE-BE    25 ->   60  +35
2. route  NL-BE    77 ->  101  +24
3. route  BE-FR    71 ->   48  -23
```

A separate count I did by hand while planning gives the same three numbers.

Expected (separate count)	Script
route BE-BE 25 → 60 +35	same
route NL-BE 77 → 101 +24	same
route BE-FR 71 → 48 -23	same

NL-BE is in. Step 10 left it out.

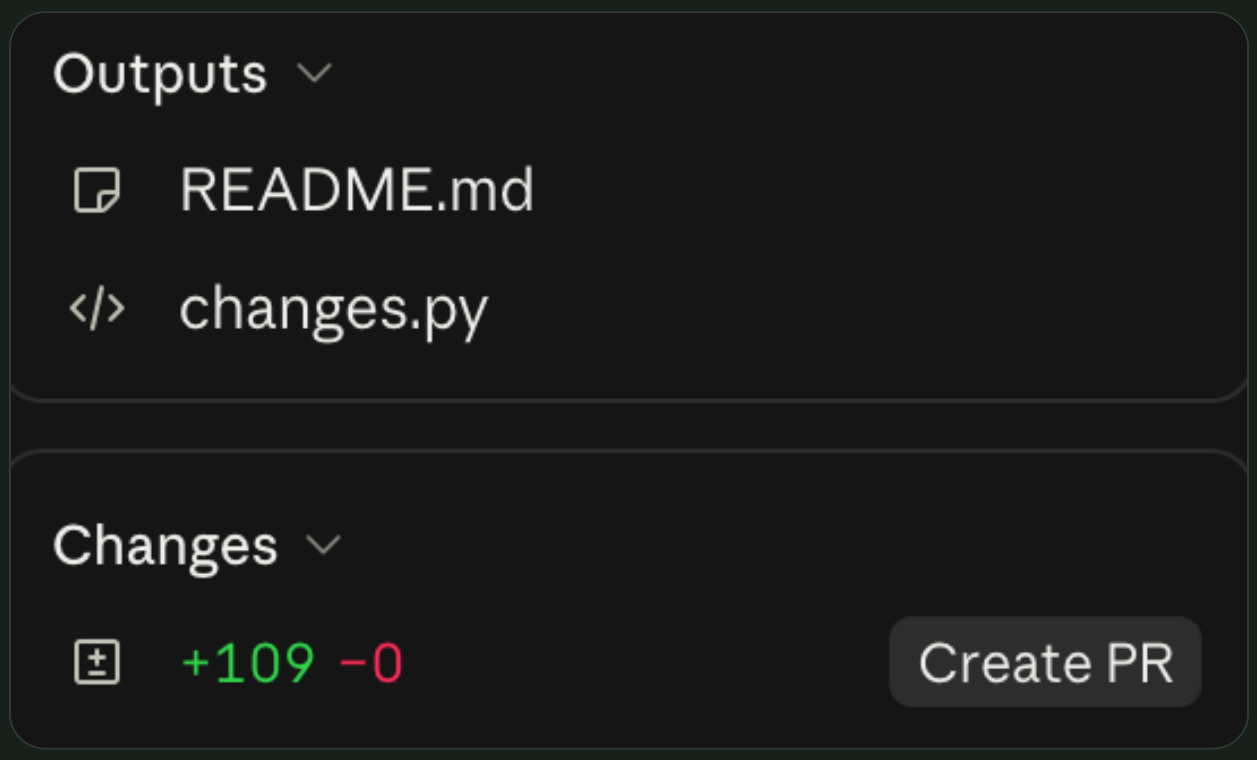

6. KEEP IT OR THROW IT AWAY

Two files on its own branch. Main did not change.

→ changes.py and a README with the rule

→ +109 -0, then one button: Create PR

→ Do nothing, and your main version stays as it was

FREE FILES

Try it on the same made-up export.

- → The task, word for word
- → The sample export and the expected result
- → How to make your first repository
- → Which answer to pick when Claude asks for the rule

Under Featured on my profile, step 11.

Tomorrow: what Claude Code just did has a name. A goal, tools, a loop and a stop rule. That is an agent.
