STARTER, STEP 5

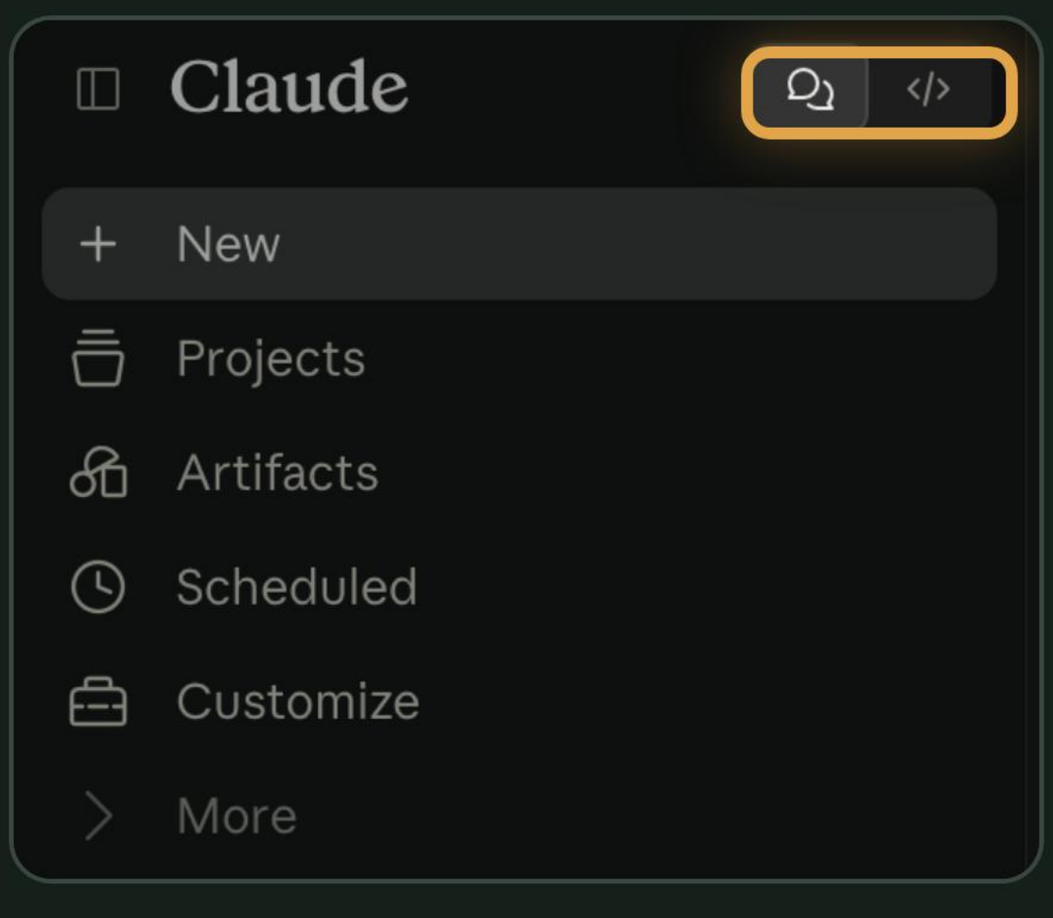

Chat, Cowork or Code? Pick by the job.

Three ways to work with Claude, and when to use which.

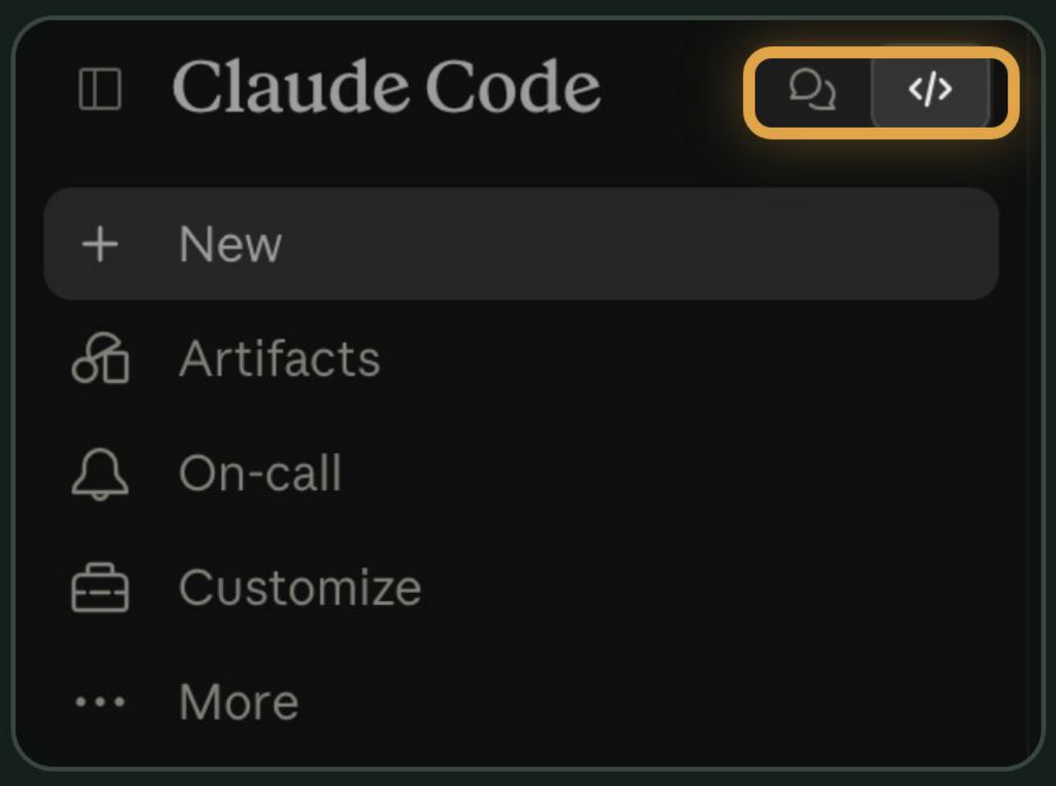

Swipe. One job per slide.

WHERE

One switch, top left on claude.ai.

Chat and Cowork

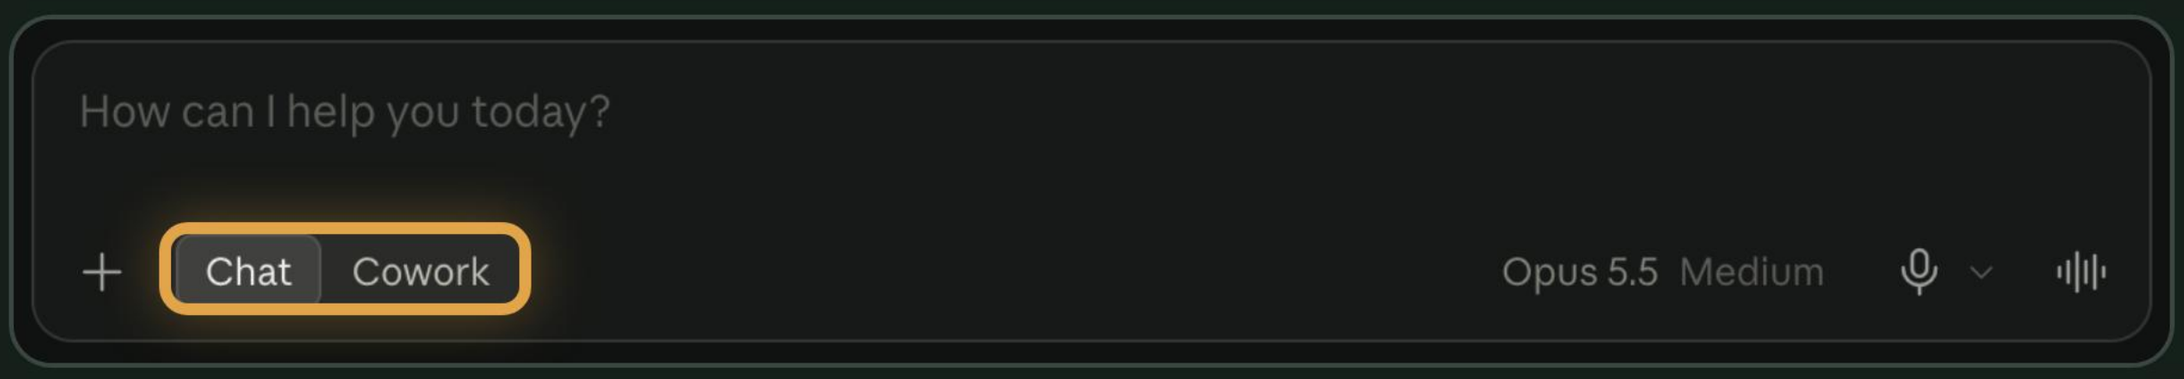

Code

Chat and Cowork share one home. Code has its own.

CHAT OR COWORK

Pick it under the message box.

Chat: you ask, Claude answers.
Cowork: you hand Claude a task with steps.

Rolling out to Pro and Max: Claude picks for you, a quick answer or a task.

1. CHAT

You ask, Claude answers.

"Write a 3-line intro for a new client email."

"Explain this contract clause in plain words."

"Check my reply before I send it."

One question, one answer. You stay in the loop on every message.

ALL PLANS

2. COWORK

You hand Claude a task with steps.

"Turn this export into a spreadsheet with totals per client."

"Read these 12 files and make one summary."

> *"The same agentic architecture that powers Claude Code, with no terminal required."*
>
> Anthropic, Cowork help article

In the desktop app it can also work with files in folders you connect.

PAID PLANS

3. CODE

Claude builds and changes software.

"Add a contact form to our website."

"Fix the bug in this script and test it."

In a folder or a GitHub repo. In your browser at claude.ai/code, in the desktop app, or in a terminal.

On Team and Enterprise: a seat that includes Claude Code.

PAID PLANS

WHICH WAY FOR WHICH JOB

The one-page table.

A quick question, a rewrite, a check	Chat
Explain a document you paste or upload	Chat
An export into a spreadsheet with totals	Cowork
Many files into one summary or report	Cowork
A change to a website or an app	Code
Fix and test a script in a repo	Code

Not sure? Start in Chat. When you copy-paste the same thing three times, it is a task: move it to Cowork.

THE RULE

Pick the tool by the job, not by the hype.

The table is free:

github.com/jwconsultancyteam/ai-starter-kit

Tomorrow: Claude makes something you can share. You send one link.
